

**Liberty Ag
Solutions**

Application Services for Fall:

Fall Burn Down

and

**Pasture Weed
Control**

**Let's get ready for spring,
this fall!**

Our Hagie STS
is supported by
well-maintained field
equipment and a
hard working team!

LAS' Hagie STS12 – 120 Foot Boom

FALL BURNDOWN BENEFITS:

- Ohio frequently has wet springs - a fall burndown reduces spring stress when preparing fields.
- A fall burndown reduces spring workload and puts the focus on planting preparations instead.
- Having clean fields in the spring can support early soybean planting and maximize yield.
- A fall burndown controls winter annuals, which may aid in soil warming; this allows for earlier planting and field work.
- Enjoy an input cost reduction for out-of-control weeds on spring acres which translates to less AI's and lower use rates.
- Control perennial weeds to prevent spring growth from occurring.
- Reduce nematodes and yield robbing pests by controlling host plants.
- Control Palmer Amaranth, Waterhemp *and more*.

Liberty Ag Solutions has the equipment and logistics to get it done!

- LAS has the equipment, logistics, and storage capacity to supply and blend high value, consistent solutions.
- We have product on the floor and access to all your trusted brands and AI's.

Pasture, Alfalfa and Cover Crop Weed Control

- Control those pesky perennial weeds such as nutsedge, bermudagrass, johnsongrass, and ragweed.
- Protect your fields from poisonous weeds like coast fiddleneck and others.
- Weeds have a very real negative financial impact on alfalfa crops when they are not controlled.
- Weeds also affect forage quality and that affects feed tonnage on pasture acres.

Small Acres Burn Application

- Small acres are often the last fields on Retail Ag's application list.
- Small fields are often charged higher due to size - up to \$2-\$4 dollars more.
- Justifying a large sprayer with a 90, 100 or 120 foot boom is a challenge for small fields.
- We are here to cover your acre investment!

LAS' Kubota TopAir 50' Low Impact Kit

High Tech Compact Application

- 50-foot boom with controllable sections.
- GPS Steer assist with Trimble Mapping and Recording.
- Features a Raven Nozzle Control.

Our Fall Burn Down Application Services can prepare your large fields for planting next spring and can control weeds on your small fields, too.

We have the equipment and logistics to take care of your acres, no matter the size of your fields.
